MATHEMATICAL FOUNDATION FOR DATA SCIENCE (Minors)

Course Objectives:

At the end of semester the students able to understand the concepts of:

- 1. Recall the basics of sets, natural numbers, integers, rational numbers, and real numbers.
- 2. Learn to use the coordinate system, and plot straight lines.
- 3. Identify the properties and differences between linear, quadratic, polynomial, exponential, and logarithmic functions.
- 4. Find roots, maxima and minima of polynomials using algorithmic methods.
- 5. Learn to represent sets and relations between set elements as discrete graphs using nodes and edges.
- 6. Formulate some common real-life problems on graphs and solve them

Course Outcomes:

At the end of the semester/course, the student will be able to have a clear knowledge on the following:

	OUTCOMES	BT
CO1	Determine whether or not particular subsets of a vector spaces are linearly	1, 2, 3
	independent.	
CO2	Understand inner products and associated norms.	1, 2, 3
CO3	Understand the concepts of probability distributions.	1, 2, 3
CO4	Understand how to find nature as well as the amount of relationship between	1, 2, 3
	the given variables	
CO5	Understanding of real life problems of graphs and solve them.	1, 2, 3

UNIT- I

Linear Algebra: Vector Spaces, Linear Independence, Basis and Rank, Linear Mappings - affine spaces

UNIT-II

Analytic Geometry: Norms, Inner Products, Lengths and Distances, Angles and Orthogonality, Orthonormal Basis, Orthogonal Complement, Inner Product of Functions, Orthogonal Projections.

UNIT-III

Probability and Distributions: Construction of a Probability space, Discrete and Continuous probabilities, sum rule, product rule and Bayes Theorem, Summary statistics and Independence, Gaussian Distribution.

UNIT-IV

Method of least squares – Straight line – Parabola – Exponential – Power curves. Regression - Regression coefficients and properties – Curvilinear Regression, Multiple Regression - Correlation – correlation coefficient – Rank correlation

UNIT-V

Graph Theory - Representation of graphs, Breadth-first search, Depth-first search, Applications of BFS and DFS

Directed Acyclic Graphs - Complexity of BFS and DFS, Topological sorting and longest path, Transitive closure, Matrix multiplication

Graph theory Algorithms - Single source shortest paths, Dijkstra's algorithm, Bellman-Ford algorithm, All-pairs shortest paths, Floyd-Warshall algorithm, Minimum cost spanning trees, Prim's algorithm, Kruskal's algorithm
